

Once installed, the UMN can manage up to three (3) units without a license key. To manage more than three units requires purchasing and installing a license key as per the instructions in the section “[Installing the License Key](#)” below.

If you have a previous version already installed on your system, you have the choice between uninstalling the previous version or upgrading the previous version to the new version. Depending on the version currently installed, you may not be able to perform an upgrade. Please refer to the *readme.txt* file on the installation CD for more information on version compatibility. Install the UMN using a login with Administrator privileges.

Installing the UMN

1. Choose a Windows 2000 / XP / 2003 / Vista / 7 machine to host the UMN.
2. On the CD-ROM, select the *setup.exe* file and start it.
3. After reviewing the instructions in the Welcome dialog box, keep the preset installation folder, or click *Browse* to specify the pathname of a different folder.
4. Select the *Typical* the type of installation.
5. Click *Next* to begin the installation.
When the installation is complete, restart your computer.

Installing the License Key

Installing a license key is not required for managing three units or less.

1. Access the *Start > Programs > Unit Manager Network 3.2 > Unit Manager Network* option.
2. In the login window click *OK*.
The *Administrator* window opens.
3. In the *Help* menu, select the *License Key Request* task.
The *License Key Request* window opens. The Machine ID key of the server running the Unit Manager service is displayed in the *Machine ID Key* field.
4. Enter the Product Key that is located on the CD case in the *Product ID Key* field.
5. Enter the company name to which register the license in the *Company Name* field.
If the Product Key is valid, the *Send email* button becomes available.
6. Click *Send email*.
This starts your default email application. The information in the *Message* section of the *License Key Request* window is copied into the body of the email.
7. Add the register@media5corp.com email address in the *To* field of your email application and put a meaningful subject such as *License Key Request*.
8. Send the email.

9. Media5 Corporation will send back a license key as an executable program. Run this program to install your license key.
You are now ready to use the UMN with the number of units requested.

Selecting the Type of Units to Display

1. Select the *Start > Programs > Unit Manager Network 3.2 > Configuration > Unit Manager Configuration* option.
The *Unit Manager Configuration Window* opens. It contains four tabs to set various information.
2. Click the *Unit Selection* tab.
This tab lets you select the type of units according to their software version. If you deselect one type of unit, all units of this type will not be displayed in the UMN and you will not know that they exist. These settings will be used when finding new Mediatrix units on the network.
3. Click *OK* to apply the changes.

Autodetecting New Units

1. Access the *Start > Programs > Unit Manager Network 3.2 > Unit Manager Network* option.
2. In the login window, click *OK*.
The *Administrator* window opens.
3. Right-click *Unit Manager* in the list on the left.
4. In the context sensitive menu, select the *AutoDetect* option.
The *Unit Detection* window opens, which lets you autodetect all Mediatrix units in a range of IP addresses that you specify.
5. Set the range of IP address within which you want to detect units.
6. Click the *Start* button.
The UMN goes through all IP addresses within the specified range and lists the Mediatrix units detected in the *Result* section. Units with a check mark were not present in the previous autodetect process. You can check/uncheck units as you want.
7. Click *OK* to add units with a check mark.
The list of Mediatrix units in the UMN is automatically refreshed. You are now ready to manage and configure these units.

Using the Online Help System

The UMN offers a built-in online help system that you can peruse at will.

1. Open the window for which you want to access the help.
2. Press the <F1> key while this window is opened.
The corresponding information is displayed.

End User Technical Support

In order to maximize technical support resources, Media5 works through its partners to resolve technical support issues. All end users requiring technical support are encouraged to contact their vendor directly.
