

# Switchvox System Builder

## Simplify Installation & Deployment

In the latest ChannelWare® update NETXUSA has added support for the new Switchvox System Builder. This addition to our suite of CPE deployment automation tools will simplify and reduce costs for installs for Digium's Switchvox appliances.

When combined with services for other CPE such as phones, routers and switches, a reseller can experience a fully plug-and-play network environment out of the box.

The Switchvox System Builder allows resellers to define templates to pre-stage Switchvox appliances with common settings for their customer installs, removing repetitive tasks and reducing the total cost.

Systems can be pre-staged to the point where the appliance and phones can be plugged in straight out of the box, ready for making in-bound and out-bound calls.

### To Sign Up:

Configurations are free for a limited time. Contact your NETXUSA sales representative for more information.

### Supported Features:

- Add supported Digium Cards (Digital or Analog)
- Add subscription users
- Unlimited base templates for various default system setups
- Preloading and verification of the latest software release for Switchvox
- Example Settings Available:
  - Create extensions with all options
  - Access Control setup
  - Network settings
  - Call Rules
  - SIP Trunks

### Benefits:

- Hardware is fully tested before shipping, no DOAs
- Time of installation greatly reduced, the average software upgrade alone can take 2-3 hours
- Reduction of errors by standardizing the process for deployment

## New - Support for Digium Phones & Asset Tags!
